DETAILED ACTION

This is the First Office Action in response to the above identified patent application filed on December 15, 2006.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which
papers have been placed of record in the file.

Claim Objections

 Claim 7 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 7 has not been further treated on the merits.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hofmann et al. (USP 5,898,388).
 - Hofmann discloses (Fig. 1) a sensor-equipped seal device comprising a fixedside seal member (5) having a core fixedly fitted to a fixed member (1) and a

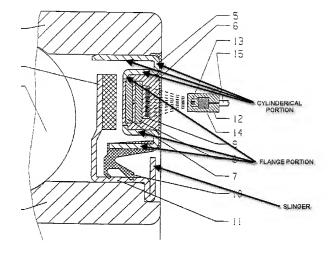

Application/Control Number: 10/577,921 Page 3

Art Unit: 3656

sensor (7) attached to the core by a molded resin, and a rotation-side seal member (11) having a slinger (see labeled figure below) fixedly fitted to a rotating member (2) and a pulser (4) secured to the slinger, the seal device being characterized in that the core of the fixed-side seal member has a cylindrical portion (see labeled figure below) fixedly fitted to the fixed member, and a flange (see labeled figure below) extending from an axially inner end of the cylindrical portion toward the rotation-side seal member so that no core portion exists between the sensor and the pulser, the flange being provided with an elastic seal (10) slidable in contact with the rotation-side seal member, the core of the fixed-side seal member is provided by molding so that an outer end of the cylindrical portion is positioned within the resin, the rotation-side seal member is provided with a lip support comprising a cylinder fixedly fitted to the slinger and a flange integral with the cylinder and axially outwardly opposed to the pulser from an axially inward position for supporting a lip portion of the elastic seal.

Application/Control Number: 10/577,921

Art Unit: 3656

Hofmann does not disclose the core portion being formed from metal, however it was notoriously known in the art to form a sealing core from metal. Alternatively, it would have been obvious to one having ordinary skill in the art at the time the invention was made to form the core portion from metal, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

Application/Control Number: 10/577,921

Art Unit: 3656

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Joyce whose telephone number is (571) 272-7107. The examiner can normally be reached on Monday - Thursday 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Ridley can be reached on (571) 272-6917. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
